

Save an Old Detail into the Land F/X Library

These steps assume that the current preference set has customized the detail template to office standards. Refer to the “Saving your Detail Library into Land F/X” Webinar Recording for more information.

- Open the old detail file with Object ARX Settings (Options > Open and Save) set to “Command Invoke”, “Do not show proxy graphics” and “Show Proxy Information Dialog Box” checked.
- If the Proxy Information Dialog Box comes up, NUKE or otherwise clean the detail.
<https://www.landfx.com/index.php/docs/cad-basics/autocad-getting-started/item/2616-clean.html>
- Ensure that the detail is scaled 1:1.
- Place the appropriate scale detail template to the side of the detail.
- Move the old detail template and replace it with the Land F/X detail template.
- Place dimensions, annotations and callouts from the F/X Details ribbon and use match properties on old dimensions, annotations and callouts as needed.
- Load the office Land F/X Detail Layer State if applicable, and move detail objects to appropriate layers.
- Rearrange the detail drawing as needed to fit the new template.
- Save the detail using the Save Detail tool in the F/X Details ribbon.
